Title:	*decimal fraction separator specification
Source:	*KML 2.2 SWG
Work item code:	
Category:	* D (Editorial modification)
Reason for change:	* Ongoing complaints about problems in locales where the decimal fraction separator is a comma, which interferes with the separator specified for <coordinates>.
Summary of change:	* In all places where this is relevant, it should be explicitly stated

	the for the purpose of this specification, only the dot (.), ASCII code 0x2E, is allowed. I agree that this is obvious, but it is always a good thing to be able to refer to an explicit clause in the specification, when complaints occur.
Consequences if not approved: ?	Misunderstanding wil not diminish.
Clauses affected: ?	* 8.30.3 Point, 8.16.3 LinearRing, 8.17.3 LineString
Additional Documents affected: ?
