Title: ⓘ	*Describe the use of RSS auto discovery for advertising which OGC services are available at a site.
Source: ⓘ	*Self
Work item code: ⓘ	
Category: ⓘ	* B (Addition of feature)
Reason for change: ⓘ	* RSS auto discovery is a well established protocol on the web that allows, for example, browsers to find RSS feeds at a site. This capability would be leveraged to make OGC services discoverable in the same way aiding other services like catalogues. Presumably a catalogue could use the RSS auto discovery protocol to find all the services available at a site and harvest them ... without having to have a priori knowledge of the URL for each capabilities document.
Summary of change: ⓘ	* Add a new clause containing the information found in the attached document.
Consequences if not approved: ⓘ	We will be even less Web friendly than we are now! :)

Clauses affected: ?	* None - this would be a new informative clause or annex.
Additional Documents affected: ?	
Supporting Documentation: ?	The attached document outline, in point form, the content of the clause on RSS auto discovery for OGC web services.
